

ENHANCEDFacility™

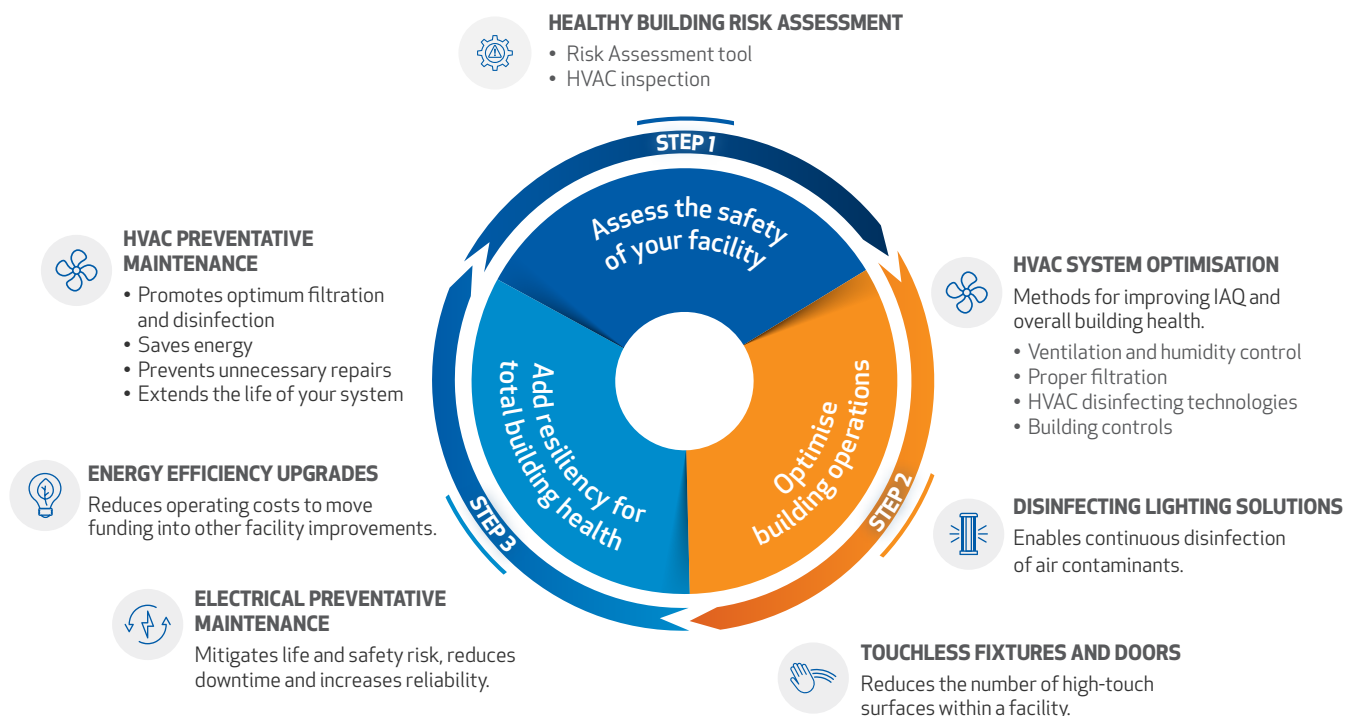

Ensure Safer, Healthier Spaces

Restore Confidence by Ensuring Healthier Air Indoors

Chances are you took reopening your facilities mid-pandemic seriously. You likely have ongoing plans that include protocols for cleaning, surface disinfection, social distancing, hand hygiene, and more. However, mounting research suggests that COVID-19 droplets may remain in the air and could be a primary source of transmission¹. Have you put measures in place to reduce the spread of pathogens in the air? ABM's **EnhancedFacility™** programme can help.

EnhancedFacility™ programme provides facility services and solutions focused on improving indoor air quality (IAQ) to enable better occupant wellbeing through improved building health, safety, and efficiency. We can help you implement effective strategies you need to improve IAQ to help reduce viral transmission.

How EnhancedFacility Works

1 <https://www.who.int/news-room/commentaries/detail/transmission-of-sars-cov-2-implications-for-infection-prevention-precautions>

Our Expert Risk Assessment and Solution Prioritisation Process

Using our proprietary Healthy Building Risk Assessment developed alongside our Expert Advisory Council, we can assess and identify IAQ challenges and recommend effective and cost-efficient solutions.

First, your facility's exposure risk is categorised

Using our proprietary Healthy Building Risk Assessment, your facility's overall risk level is identified (low to very high).

Then, the highest priorities to each facility are identified

The most important and effective strategies for your facility's specific risk level are determined.

Lastly, targeted solutions based on risk level are developed for maintenance, lighting, and HVAC systems

A report of fact-based recommendations help you form a comprehensive strategy for reopening and operating more safely.

Healthier Facilities, Healthier Occupants

There are several new and advanced technologies for biohazard disinfection of the air and surfaces that may be effective depending on the unique needs of the facility, including Needlepoint Bipolar Ionization technology within HVAC systems, Dry Hydrogen Peroxide Generation, and Far-UV and UV-C lighting technologies. These specific recommendations help prioritise budgets to focus on actions that will make the most impact.

EnhancedFacility™ complements the cleaning and disinfection offered in EnhancedClean™ (visit EnhancedClean.co.uk for more information). Together, they help reduce viral transmission on surfaces and in the air. Additional services like the installation of touchless fixtures and doors will also lower your facility's risk. These programmes enable greater occupant trust and confidence about your commitment to their health and safety, during the pandemic and beyond.

LET'S STAY
**HEALTHY
TOGETHER.**

Take the next step towards a healthier, safer space for your occupants – book a Healthy Building Risk Assessment today.
